MeetMind – Meeting and Team Coordination System

Turning every meeting into minutes, keywords and tracked actions.

Sanshia J · 240701471 ·

Meetings happen weekly. Follow-up often doesn’t.

A team needs more than a chat thread. It needs traceability from discussion to done.

Scattered details

Meetings are announced on e-mail and chat, and notes stay on paper or in personal files.

Minutes arrive late

Minutes are typed late or not at all, so decisions are hard to recall later.

No task ownership

Tasks agreed in a meeting have no recorded owner, due date or status.

THE OPPORTUNITY **One connected workspace for meetings, minutes and action items.**

One low-code app. One connected meeting record.

Built in Zoho Creator using four linked forms, list reports, Zia AI, a dashboard and Deluge workflows.

SCHEDULE
Meetings form

RECORD
Minutes & decisions

EXTRACT
Zia keywords

ASSIGN
Action items & owners

MONITOR
Engagement dashboard

The same saved records power day-to-day follow-up and the team dashboard.

A deliberately simple data model

Four linked forms keep each meeting and its follow-up together.

01 Meetings

Title · Date · Time · Agenda · Location · Organiser · Status

02 Meeting Minutes

Meeting (lookup) · Notes · Decisions taken · Summary

03 AI Keywords

Extracted_Keywords – Zia Keyword Extraction field based on Meeting Notes

04 Action Items

Title · Due date · Priority · Status · Description · Team member

05 Team Members

Name · E-mail · Role · Department · Status

06 Relationships

One meeting → many sets of minutes; one team member → many action items.

Workflows run at every key moment

Deluge scripts run on form events, and a schedule runs on a timetable.

01–02	**Meeting added / edited**	Confirm that the meeting was saved or updated (DS-01, DS-02).
03	**Minutes submitted**	Confirm that the minutes were saved; Zia extracts keywords from the notes.
04–05	**Action item added / edited**	Confirm new tasks and status updates (DS-04, DS-05).
06	**Team member added**	Confirm the new member’s registration (DS-06).
Schedule	**Meeting reminder**	Upcoming_Meeting_Reminder e-mails the team about upcoming meetings through Zoho Mail.

From raw notes to clear follow-up

Zia AI and lookup fields turn free text into structured, linked records.

Zia keywords

Meeting Notes → Extracted Keywords.

Example: “Discussed budget approval, testing deadline and deployment plan” → budget approval, testing deadline, deployment plan.

Linked records

Minutes are tied to their meeting, and tasks to a team member, through lookup fields.

One meeting → many sets of minutes.

Status tracking

Pending → In Progress → Completed (or On Hold).

The dashboard counts completed tasks automatically.

Keywords are extracted automatically. Users focus on writing clear meeting notes.

Keep every record clean and linked

Field rules and fixed choices are applied when a form is submitted.

Meeting link	Minutes cannot be saved without selecting a meeting (mandatory lookup).
Status values	Meeting and action statuses come from fixed drop-down lists.
Priority	Only High, Medium or Low can be chosen.
Dates & times	Date (dd-MMM-yyyy) and time fields reject free text.
E-mail	Member e-mail must be a valid address and is flagged as personal data.

On success: a confirmation is logged for every meeting, set of minutes, task and member.

Day-to-day tracking meets team-wide insight

List reports support follow-up; the dashboard summarises team progress.

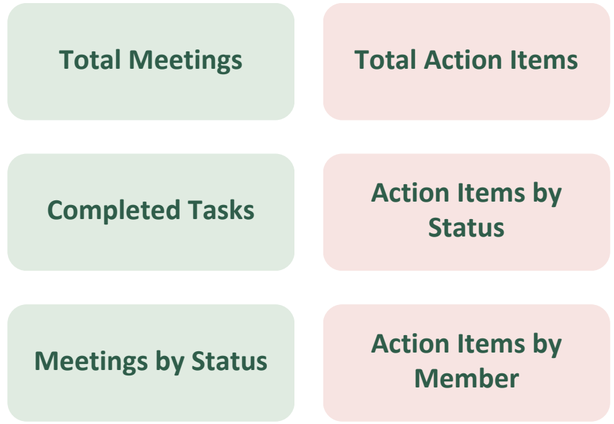

List reports

- All Meetings, Minutes, Action Items, Team Members
- Search, sorting and filters
- Record-level view and edit actions

Action Items Overview

- Board grouped by action status
- Pending and In Progress work at a glance
- Supports weekly follow-up

USER ENGAGEMENT DASHBOARD

Dashboard counts were checked against the reports in the live application.

Access is designed around responsibility

Permission profiles and notifications support controlled collaboration.

Role-based permissions

Administrator
Full access to all forms, reports and the dashboard.
Meeting Organiser
Creates meetings, records minutes and assigns action items.
Team Member
Views meetings and updates their own action items.

Active integrations

Zoho Mail
Reminder e-mails about upcoming meetings.
Zoho CRM
Records synced to Zoho CRM through an OAuth connection.
Zia AI
Keyword Extraction field on the meeting notes.

Permission profiles protect personal data such as member e-mail addresses.

A real meeting, with visible follow-up

Test meetings were used to verify keyword extraction, task tracking and the dashboard.

TEST DATA

3 meetings

Minutes · Action items

Linked to team members

Keywords

Extracted by Zia for both test sets of minutes

2 action items

Pending and In Progress on the status board

Dashboard check

Meeting and action-item counts on the dashboard matched the list reports.

Additional scenarios are described in the report; only demonstrated checks should be presented as personally verified.

A practical foundation for accountable teams

The current app establishes the record, rules and reporting layer. Future work can extend the ecosystem.

Smart reminders — Reminder e-mails one day and one hour before each meeting, in IST.

Auto-fill from lookup — Copy the meeting title and date into the minutes automatically.

Overdue-task alerts — A daily e-mail to owners of overdue action items.

Role-based access — Separate Organiser and Team Member permission profiles.

Calendar & API — A calendar view of meetings and REST API access for other tools.

A simple low-code workflow can turn every meeting into accountable action.
