

EXPERIMENT 4

Reports Creation in Zoho Creator

1. Aim

To study how reports are created in Zoho Creator and to build List, Kanban, Calendar and Summary reports, with filter criteria, sorting and grouping, for the Employee Leave Management System so that stored leave data can be viewed, analysed and exported in a meaningful way.

2. Introduction

In Zoho Creator, a form is used to collect data and a report is used to display that data. Every record submitted through a form is stored in the application, and a report presents those records to the user in a chosen layout. Reports can show all records or only a filtered subset, and users can search, sort, group, edit, delete and export records directly from the report view.

2.1 Types of Reports

Report Type	Purpose
List Report	Displays records as rows and columns in a simple, editable table.
Grid Report	Displays records as a spreadsheet-like grid with fixed columns.
Kanban Report	Shows records as cards arranged in columns based on a field such as status.
Calendar Report	Plots records on a calendar according to a date field.
Timeline Report	Arranges records chronologically along a timeline.
Map Report	Shows records on a map using address or location fields.
Summary Report	Groups records and shows aggregated values such as counts and totals.

3. Objectives of the Study

- To understand the role of reports in a Zoho Creator application.
- To create List reports from existing forms and choose which fields are displayed.
- To apply filter criteria so that a report shows only the required records.
- To use sorting and grouping to organise report data.
- To create Kanban, Calendar and Summary reports for different viewing needs.
- To test the reports with sample data and export report output.

4. Application Selected: Employee Leave Management System

The Employee Leave Management System is used for this experiment. Its Leave Request form stores Request ID, Employee Name, Department, Leave Type, From Date, To Date, Number of Days, Reason, Applied Date and Status. Reports are created on the Leave Request form to display this data in different layouts.

4. Application Selected: Employee Leave Management System

The Leave Request form stores the information required to track leave applications from submission through approval. Different reports are created from the same form so that requests can be viewed by status, date and leave type.

5. Procedure

- Log in to Zoho Creator and open the Employee Leave Management System in edit mode.
- Check that the Leave Request form contains sample leave records.
- Add a new Report component and select the Leave Request form as the source.
- Create the List, Kanban, Calendar and Summary reports.
- Save the application and open each report to check the output.
- Take screenshots of the reports.

6. Reports Created

Report Name	Type	Description
All_Leave_Requests	List	No filter
Pending_Requests	List	Status = Pending
Leave_Status_Board	Kanban	Grouped by Status
Leave_Calendar	Calendar	From Date
Leave_By_Type	Summary	Grouped by Leave Type

7. Illustrative Example

7.1 List Report - All Leave Requests

Employee Leave Management						
Dashboard Leave Requests Employees Reports Leave Status Settings						
Reports						
All Leave Requests						
Request ID	Employee	Department	Leave Type	From Date	To Date	Status
LV-001	Arun Kumar	CSE	Casual	12-Sep-2026	13-Sep-2026	Approved
LV-002	Priya S	ECE	Medical	14-Sep-2026	16-Sep-2026	Pending
LV-003	Karthik R	MECH	Casual	18-Sep-2026	19-Sep-2026	Approved
LV-004	Divya P	IT	On Duty	20-Sep-2026	20-Sep-2026	Rejected
LV-005	Naveen M	CSE	Vacation	22-Sep-2026	25-Sep-2026	Pending
Filter: Department = All Sort: From Date 5 records						

7.2 Kanban Report - Leave Status Board

Employee Leave Management		
Dashboard Leave Requests Employees Reports Leave Status Settings		
Reports		
Leave Status Board		
Pending Priya S Medical 14-16 Sep Naveen M Vacation 22-25 Sep	Approved Arun Kumar Casual 12-13 Sep Karthik R Casual 18-19 Sep	Rejected Divya P On Duty 20 Sep

7.3 Calendar Report - Leave Calendar

Reports

Leave Summary by Type

Total Requests: 18

Casual		7
Medical		4
Vacation		3
On Duty		2
Other		2

Summary: Casual leave has the highest number of requests.

8. Advantages

- Data from one form can be presented in many ways without repeating it.
- Filter criteria show only the records that matter to a particular user.
- Sorting, grouping and searching make large record sets easy to manage.
- Kanban, Calendar and Summary reports give visual insight beyond a plain table.
- Reports can be edited, exported and shared with little or no coding.

9. Limitations

- Incorrect criteria or field selection produces misleading reports.
- Some report types and options depend on the Zoho Creator plan in use.
- Complex calculations or cross-form summaries may need Deluge scripting or Pages.
- Very large data sets can make report loading slower.

10. Result

The experiment was successfully completed. Reports for the Employee Leave Management System were created in Zoho Creator, including List reports with filter criteria, a Kanban report, a Calendar report and a Summary report. The reports were tested with sample records and produced the expected output.

11. Conclusion

Reports are the presentation layer of a Zoho Creator application. By combining report types with criteria, sorting and grouping, a single set of forms can serve many different information needs. The Employee Leave example shows how leave status, dates and leave types can be tracked clearly once suitable reports are in place.
