

EXPERIMENT 3

Application Building using Zia Assistant

1. Aim

To develop a simple Event Management application in Zoho Creator with the assistance of Zia Assistant, and to understand how AI-assisted features can support application building and event data management.

2. Introduction

Zoho Creator is a low-code application development platform that provides visual tools for creating forms, reports, workflows, and applications. Zia Assistant provides AI-based assistance for selected application-building and data-related tasks. In this experiment, an Event Management application is created to record, organize, and manage college events.

3. Objectives of the Study

- To understand the basic process of building an application in Zoho Creator.
- To create an Event Management form with suitable fields.
- To use Zia Assistant during the application-building process.
- To organize event information using forms, reports, and workflows.
- To create and preview a functional Event Management application.

4. Procedure

1. Log in to the Zoho Creator platform.
2. Create a new application named Event Management.
3. Use Zia Assistant to assist with the initial application structure.
4. Create an Event form with fields such as Event ID, Event Name, Event Date, Event Type, Venue, Organized By, Description, Maximum Participants, Registration Link, and Status.
5. Configure suitable field types and mark essential fields as mandatory.
6. Use Zia Assistant to support selected application-building and data-related tasks.
7. Create reports to display and review event information.
8. Save and preview the application to verify the form and its components.
9. Enter sample event records and verify that the information is stored correctly.

5. Illustrative Example

An Event Management System can be used to maintain college event details in a structured manner. The application records event information such as date, type, venue, organizer, participant limit, registration details, and status.

5.1 Implementation using Zoho Creator

- Event ID – Auto Number field for generating a unique event identifier.
- Event Name – Single Line field for entering the event name.
- Event Date – Date field for recording the date of the event.
- Event Type – Dropdown field for selecting Technical, Cultural, Workshop, Sports, or Other.
- Venue – Single Line field for recording the event venue.
- Organized By – Dropdown field for selecting the responsible club or department.
- Description – Multi Line field for describing the event.
- Maximum Participants – Number field for specifying the participant limit.
- Registration Link – URL/Single Line field for storing the registration link.
- Status – Dropdown field for tracking Upcoming, Ongoing, or Completed events.

5.2 Application Building using Zia Assistant

Zia Assistant can assist the application-building process by suggesting relevant fields, helping structure the application, and supporting selected data and reporting tasks. The suggestions can be reviewed and modified according to the event management requirements.

The screenshot displays the Zoho Creator form builder interface for an 'Event Management' application. The interface is divided into several sections:

- Basic Fields:** A grid of field types including Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Checkbox.
- Field List:** A list of fields being added to the form, each with a field type and a value:
 - Event ID: Auto generate
 - Event Name: (empty text field)
 - Event Date: dd-MMM-yyyy
 - Event Type: Select
 - Venue: (empty text field)
 - Organized By: Select
 - Description: (empty multi-line text area)
 - Max Participants: (empty number field)
 - Registration Link: (empty text field)
 - Status: Select
- Field Properties:** A panel on the right for configuring the selected field (Event Name):
 - Field name:** Event Name
 - Field link name:** (empty)
 - Validation:** ☒ Mandatory, ☐ Unique
 - Display Fields:** ☐ Prefix, ☐ Suffix
 - Initial Value:** ☒ Default, ☐ User defined
- Bottom Navigation:** Tabs for Form, Reports, Pages, Workflow, and Settings.

5.4 Application Features

- Event Form – Captures complete event information.
- Event Report – Displays stored events in an organized manner.
- Registration Details – Stores participant and registration information.
- Zia Assistance – Supports selected application-building and data analysis tasks.

6. Advantages and Limitations

Advantages

- Low-code environment simplifies application creation.
- Zia Assistant provides AI-based assistance for selected tasks.
- Forms and reports can be combined in one application.
- Suitable for rapidly developing structured event applications.

Limitations

- Zia capabilities depend on the features provided by the platform.
- Complex requirements may require manual configuration or scripting.
- AI-assisted suggestions may need review and refinement.

7. Result

Thus, a simple Event Management application was successfully developed in Zoho Creator with the assistance of Zia Assistant. The experiment demonstrated how a low-code platform and AI-assisted features can be used together to create forms and reports for managing event information with reduced manual development effort.
